Problem – Solution Fit Template

Date	11 February 2026
Team ID	LTVIP2026TMIDS76292
Project Name	Laptop Request Catalog Item
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Purpose / Vision

CS 1. CUSTOMER SEGMENT(S) Employees (new joiners & existing staff) who need a laptop for daily work; IT Administrators who manage and configure the service catalog ; Managers / Approvers who authorize laptop requests	CC 6. CUSTOMER CONSTRAINTS Employees can only access the self-service portal — no admin rights; Budget approval required before any procurement; Must select from an approved hardware list (governance policy); Requires network access to the ServiceNow instance	AS 5. AVAILABLE SOLUTIONS Email to IT — simple but untracked, no visibility; Walk-in / verbal request — fast but no documentation or audit trail; Spreadsheet form — structured but manual, no approvals; Generic ticketing (Jira etc.) — tracked but not tailored for asset procurement
J&P 2. JOBS-TO-BE-DONE / PROBLEMS Employees need a quick, official way to request a laptop without chasing IT through email or walk-ins; The existing manual process has no dynamic form behaviour — all fields shown regardless of relevance, leading to inaccurate data; No structured approval chain — requests approved informally with no audit trail; IT admins need to deploy catalog configurations across instances reliably; Employees want real-time visibility into their request status after submission	RC 9. PROBLEM ROOT CAUSE No centralized system for hardware requests — historically done via email or verbally; No form intelligence — all fields always visible causing confusion and bad data collection; No built-in approval chain — governance gaps and no audit trail	BE 7. BEHAVIOUR Direct: Opens ServiceNow portal → Service Catalog → Hardware → Laptop Request → fills Laptop Model, Justification, Additional Accessories → clicks Order form; Direct: Uses 'Reset Form' UI Action to clear all fields without reloading; Direct: Reviews Order Status page via REQ number (e.g. REQ0010005) to track approval stages; Indirect: Discusses laptop model with colleagues before filling the form; Indirect: Approver check budget outside ServiceNow before acting on approval task
TR 3. TRIGGERS New employee onboarding — laptop needed from day one; Existing laptop is damaged, stolen, or too slow; Manager assigns a new project requiring a different machine; Organisation-wide IT hardware refresh cycle announced	SL 10. YOUR SOLUTION A Laptop Request Catalog Item built in ServiceNow under the Hardware category; Dynamic variables: Laptop Model, Justification, Additional Accessories (checkboxes); Accessories Details (shown only when checkbox is ticked via UI Policy); A Reset Form UI Catalog Action lets users clear fields in one click. On submission, a REQ number and estimated delivery date are generated instantly. All 10 configurations bundled in an Update Set ("Laptop Request Project"), imported as SaaS, and committed to target instance dev324774 for governed, repeatable deployment	CH 8. CHANNELS of BEHAVIOUR 8.1 ONLINE ServiceNow self-service portal — primary channel for form submission; ServiceNow Order Status page — track REQ number and fulfillment stages; Email inbox — order confirmation and approval notifications; ServiceNow Admin UI — IT admins manage catalogs , update sets, and workflows 8.2 OFFLINE IT help desk walk-in or phone call — for employees unfamiliar with the portal; Team meetings / Slack — informal discussion about which laptop model to select; Manager 1:1 — justification discussed verbally before submitting; Physical laptop handover by IT team — final fulfillment step outside the system
EM 4. EMOTIONS: BEFORE / AFTER Frustrated by slow manual process, uncertain if request was received, anxious about delays After: Confident — REQ number confirms submission, in control — can track status anytime, reassured by estimated delivery date
